

Instruction sheet

Epex clean

Before using Epex clean, please note:

- ◆ Cover all furniture, doors and other loose objects with foil.
- ◆ Ensure sufficient ventilation, i.e. at least open all the windows and doors.
- ◆ Do not process more than 30m² at a time
- ◆ Wear appropriate protective clothing (gloves, long clothing and goggles).

Step-by-step guide

1

Apply approx. 100 ml of epex clean per square metre to the surface and massage in thoroughly with a brown pad.

For floor tiles, it is also recommended to sprinkle quartz sand (a handful) to create an additional abrasive effect and prevent slipping.

2

epex clean should now be left to react for at least 1 and a maximum of 5 hours. The optimum exposure time should be determined on a sample surface before final use.

3

Afterwards, the surface must be treated again with a brown pad. (analogous to the first step)

4

The product should now be left to react again for about 30 minutes.

5

Rinse the surface with sufficient water.

6

Clean the damp surface with an alkaline cleaner (pH > 10). Again, approx. 100 ml per square metre is sufficient.

7

Rinse the surface again with sufficient water and remove any residues with a wet vacuum cleaner.

8

If the desired result has not been achieved, it should be cleaned again with alkaline cleaner. (Repeat process from step 6)
